

Greeting

On August 4 I attended a wind summit at SVSU. This summit was very informational. I was told that if Kawkawlin Twp is interested in being looked at as a potential wind farm area there are some things that we can do to increase our chances as being picked.

On the average it takes about 4 years to put a farm together, with the zoning and planning, easements required. To help speed this up a Twp. should have these in place and have an area where these farms would be accepted.

Kawkawlin Twp as a wind power ordinance in effect an our zoning allows them in Agricultural zones.

If there are any land owners interested in trying to secure a wind farm in Kawkawlin Twp please contact me at the office or when you see me, if you have any questions.
